OPTIWISE™ GRADE OPTIMIZER

Optiwise™ is a proprietary grade optimization system that ensures specified grade targets are met in real-time at the Ecooustic Grader. Optimal thresholds result in wise decisions maximizing your grade value whilst ensuring compliance.

Optiwise™ works by monitoring the board population and adjusting thresholds within allowable limits when a change is required. Optiwise™ reacts immediately to variation in your resource meaning thresholds are never too high nor too low. Continuous monitoring and optimization to your requirements puts you in total control of your grading process.

- React immediately to variation's in resource and market conditions
- Capture maximum grade yield while ensuring grade compliance
- Identify the maximum value grade mix for a given condition
- Automated grade monitoring, control & reports
- Improved grade quality through consistent results

Optiwise™ is based on advanced statistical and optimization techniques. We crunch the numbers so you don't have to. Optiwise™ analysis of real mill data consistently verifies substantial revenue gains. We help you maximize the results from your grading process. Small improvements in grade yield provide significant revenue gains, meaning a very fast return on investment.
